Varying transition energy: physical pieces and a simple hull
Efficient physical pieces
Lower convex hull
Included endpoint
Excluded right endpoint
(a) Entire efficient frontier
(b) Zoom: 0 <= E <= 48
Terminal grid energy L (same units)
Early grid energy E (synthetic energy units)

Analytical illustration: k = 3, weights (1, 2, 4), capacity B = 80; constant six-bus fee omitted.
The right panel enlarges the first 48 energy units. Eight physical pieces do not imply eight hull vertices or hardness.
